CURRICULUM & TECHNOLOGY

CAPABILITIES / OCTOBER 2026

Omaha, Nebraska | Serving the Midwest

Practical computing curriculum.
Built with your faculty.

We help Midwest colleges align computing courses with program goals, develop applied assessments, and equip faculty with editable teaching materials and a practical implementation plan.

THREE WAYS TO BEGIN

Update a course

Outcomes and module plans. Applied labs, projects, and rubrics. Editable instructor materials and implementation guidance.

Build a new offering

Competency frameworks and prerequisites. Course sequences and assessment plans. Course development and phased implementation.

Plan improvements

Curriculum and assessment maps. Prioritized findings. A modernization roadmap with implementation considerations.

Faculty workshops, LMS packaging, technical setup, and ongoing updates can support these engagements.

EXAMPLE ENGAGEMENT

Focused course review

Review: Syllabus, course and program outcomes, selected assignments and rubrics, and faculty priorities.

Receive: An editable outcomes-to-assessment map, prioritized findings, and a recommended sequence of updates.

Collaborate: Kickoff, feedback on draft findings, and handoff. Faculty retain academic decisions and approval.

Plan: A written proposal sets the schedule, fee, review windows, and deliverables after an initial scope discussion.

LED BY ALEX SHAW

Software-engineering leadership, including lead engineering work at Mutual of Omaha, alongside teaching and curriculum-development experience at Metropolitan Community College and Midland University. Based in Omaha and available to colleges across the Midwest.

Affiliations describe Alex's individual experience, not consulting client relationships or institutional endorsements.

LET'S DISCUSS YOUR PROGRAM
