CURRICULUM & TECHNOLOGY

ALEX SHAW / COURSE DEVELOPMENT
Omaha, Nebraska | Serving the Midwest

Modernize or create *computing courses.*

I'm a software professional and a teaching professional. I bring both kinds of experience to developing courses for your college - with practical projects, clear assessments, and materials ready to teach.

TWO WAYS I CAN HELP

Modernize an existing course

Review the syllabus and existing materials. Update technologies, examples, and applied projects. Refine assessments, rubrics, and instructor guidance.

Create a new computing course

Define outcomes, prerequisites, and a module plan. Build lessons, labs, projects, and assessments. Prepare editable teaching materials and a faculty handoff.

SOFTWARE EXPERIENCE + TEACHING EXPERIENCE

Software professional. My background includes enterprise software-engineering leadership and lead engineering work at Mutual of Omaha.

Teaching professional. My teaching and curriculum-development experience includes Metropolitan Community College and Midland University, with work in web development instruction and systems administration curriculum design.

Affiliations describe my individual experience, not consulting client relationships or institutional endorsements.

WORKING WITH YOUR FACULTY

We agree on the learners, course goals, deliverables, timeline, and fee. I develop the materials with faculty feedback and provide a clear handoff. Faculty retain academic decisions and approval.

LET'S TALK ABOUT YOUR COURSE

alexandergshaw@gmail.com

Tell me what you teach, what needs to change, or what new course you want to offer.
